GeoEye is a group of imagery specialists focusing on satellite and aerial imagery available to public and private sectors. The office environment is a complex collection of parts, 3 floors 75,000SF of 60% private offices and 40% workstations, a 2,000SF data center, 1,800SF SOCC (Satellite Operations Control Center), 1,000 SF SCIF space, large conference locations on each floor, a multi-purpose room for tutorials and training, along with a dynamic demonstration room and board room.

The design is a simple organic design focusing on sustainability side by side with technology and a nod to the main focus on the earth. All offices face out, allowing workstations and eco-corridors a closer connection with the outdoors and helping the design achieve LEED CI Silver rating. Satellite images and bold brand related colors throughout the office space provide further contrast and act as identifiers of different spaces.
