This project involved the renovation of a three-story racquetball club with 18' high ceilings into a full-service gym operating 7 days a week. The gym has areas for free weights, nautilus equipment, and spinning classes. The facility also provides saunas in the locker rooms as well as a pro-shop that sells clothing, bags, and food.

By breaking through the main level floor and wall, the space was opened up and clients/visitors can now watch the activity on the lower level. Bright colors were used to give the gym an active, vibrant feel.

This project involved the renovation of a one-story drug store into a full-service gym operating 7 days a week. The gym has areas for free weights, nautilus equipment, and spinning classes. The facility also provides tanning booths, saunas in the locker rooms, a juice bar, a child care center, and a pro-shop selling clothing, bags, hats, and food.

The reception/sales area and the juice bar are open spaces immediately adjacent to the workout floor, so customers and visitors can watch the activity. Light, bright colors were used to give the gym an airy, spacious feel.
