Reston Bible Church retained DBI to provide Master Planning, Architectural Design, Interior Design and Furniture layout services for a new church facility on a 23-acre site in rapidly growing, Eastern Loudoun County. The interior spaces include a 900-seat sanctuary, 4,500 sf Meet and Greet, classrooms for nursery to fifth grade, adult education and office space.

The entire facility was modeled in Revit 2008 and rendered with 3D Studio. The completed BIM model has allowed the Project Team to identify and manage potential spatial system conflicts during design. It has also given the Owner instant 3-D views of any aspect of the design “on the fly” during live face-to-face meetings. Finally, it has given the Project Team far better, ongoing project information, which has allowed the team to constantly monitor/manage project schedule and budget.
